Appropriate engineering controls: See Section 7 for information about design of technical facilities.

Individual protection measures, such as personal protective equipment

Respiratory protection: Not required

Eye / face protection Goggles recommended during refilling.

Hand protection

Protective gloves.

The glove material has to be impermeable and resistant to the product / the substance / the preparation. Due to missing test no recommendation to the glove material can be given for the product / the preparation / the chemical mixture. Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation.

Material of gloves:

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

Penetration time of glove material:

The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.

Body protection:

Protective work clothing

Thermal hazards:

Not required for normal conditions of use

Environmental exposure controls

Control measures must be made in accordance with Community environmental protection legislation.
